Tarea 1: Dos bolas de masa $m_B=3m_A$. La bola B tiene una rapidez de 3m/s y la bola A tiene una rapidez de 6m/s, Encuentre las velocidades después del choque. Considere choque ELÁSTICO, Ver figura.

Resolución:

$$m_B = 3m_A \ v_A = 6m/S \ v_B = 3m/S$$

$$\sum \vec{p}_i = \sum \vec{p}_f$$

$$m_A V_A - m_B V_B = m_A V_A' + m_B V_B'$$

$$\eta_{A}^{h}6 - (3\eta_{A}^{h})3 = \eta_{A}^{h}v_{A}^{h} + 3\eta_{A}^{h}v_{B}^{h}$$

$$6 - (3)3 = v'_A + 3v'_B$$

$$-3 = v'_{A} + 3v'_{B}$$

$$v'_{A} = -3 - 3v'_{B}$$
(1)

$$\sum E_{Ci} = \sum E_{Cf}$$

$$\frac{1}{2}m_{A}v_{A}^{2} + \frac{1}{2}m_{B}v_{B}^{2} = \frac{1}{2}m_{A}v_{A}^{2} + \frac{1}{2}m_{B}v_{B}^{2}$$

$$m_A v_A^2 + 3 m_A v_B^2 = m_A v_A^2 + 3 m_A v_B^2$$

$$6^2 + 3 * 3^2 = V_A^{\prime 2} + 3 V_B^{\prime 2}$$

$$63 = V_A^{'2} + 3V_B^{'2}$$
(2)

La ecuación (1) en la (2)

$$63 = (-3 - 3v'_B)^2 + 3v'_B^2$$

$$6 \overset{21}{3} = \overset{3}{\cancel{2}} (1 + V'_{B})^{2} + \overset{1}{\cancel{3}} V'_{B}^{2}$$

$$21 = 3(1 + 2v'_B + v'^2_B) + v'^2_B$$

$$21 = 3 + 6v'_B + 3v'_B^2 + v'_B^2$$

$$\frac{2}{4V_{B}^{2}} + \cancel{0}V_{B}^{\prime} - 1\cancel{\beta} = 0$$

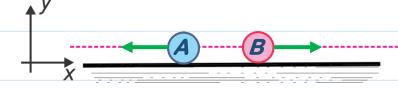

$$2v_{B}^{\prime 2} + 3v_{B}^{\prime 2} - 9 = 0$$

1ra sol
$$V'_{B} = 1.5 \, \text{m/s}$$

2da sol
$$V'_{B} = -3 \frac{m}{s}$$

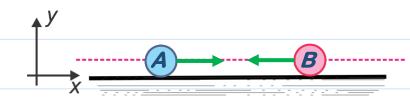

Analizamos las soluciones

DESPUES DEL CHOQUE

Si
$$V'_B = -3 \frac{m}{s}$$
 \Rightarrow $V'_A = 6 \frac{m}{s}$
